

## Creating a Hello World Application in JetBrains IntelliJ IDEA

JetBrains IntelliJ IDEA is an integrated development environment (IDE) for the Java Development Toolkit (JDK). The tutorial here, <https://www.jetbrains.com/help/idea/creating-and-running-your-first-java-application.html>, helps you set up your first Java application.

Once you have completed the walkthrough above, please add the File and Class documentation as outlined in the CS Java Documentation Policy under Course Info on D2L.

After you have correctly documented your code, upload the .java file (source code only) to the Lab 1 D2L drop box.

## Deliverables

Make sure your code has the required file header and correctly formatted identifier names, as outlined in the CS Java Documentation Policy under Course Info on D2L.

To receive credit for this lab you must

1. Demonstrate the code and executable to the instructor during this lab, during office hours, or during the next lab period.
2. Zip the src folder in your project directory and upload the instructor approved .java files to the Lab 1 D2L drop box.
